FYI Joins United Nations Global Compact

Commits to Implement Universal Sustainability Principles

Highlights

- FYI joins United Nations Global Compact
- FYI furthers its ESG commitments to sustainable development
- UN sustainability principles aligns strongly with FYI innovative low carbon HPA production ambitions

Emerging critical mineral company FYI Resources (ASX:FYI) (or the **Company**), is pleased to announce that the Company has joined the United Nations Global Compact as a commitment to implement universal sustainability principles and UN goals via its critical minerals project development.

FYI's application to join the United Nations Global Compact in Australia (UNGC) has been accepted. FYI is excited to join a network of over 16,000 businesses from more than 60 countries in sharing best practices and emerging solutions for continued global ESG improvements. As a member, FYI will subscribe to adopting the UN SDG goals as our ESG framework as they are central to our commitment to a sustainable future.

United Nations
Global Compact

For further information on UNGC please visit: www.unglobalcompact.org

FYI Resources Managing Director, **Mr. Roland Hill commented:** "FYI is proud to be a member of the UNGC and support their sustainability goals. Our innovative low-carbon HPA project demonstrates not only outstanding project investment metrics but equally provides a strong sustainable environmental, social and governance advantage over current HPA production leading to improved ESG future."

About FYI Resources Limited

FYI has developed an innovative process design for the integrated production of high quality, high purity alumina (HPA) predominantly for electric vehicles (lithium-ion batteries), sapphire glass (LED) and other broader tech applications.

FYI's is positioning itself to be a significant producer of 4N and 5N HPA in the rapidly developing high-tech product markets.

FYI applies both an ESG and economic overlay of the Company and its operations to ensure long-term sustainable and shareholder value is created via the development of the Company's innovative, high quality, ultra-pure HPA project.

HPA is increasingly becoming the primary sought-after input material for certain high-tech products principally for its unique properties, characteristics and chemical properties that address those applications high specification requirements such as LED's and other sapphire glass products.

The longer-term driver for HPA, with forecasts of >17% year on year growth (GAGR)*, is the outlook for the burgeoning electric vehicle and static energy storage markets where the primary function is in the use as a separator material between the anode and cathode in batteries to increase power, functionality and safety of the battery cells.

The foundation of the HPA strategy the Company's moderate temperature, atmospheric pressure innovative process flowsheet. The strategy's quality attributes combine resulting in world class HPA project potential.
